Material specification

- Metal parts: stainless steel AISI 304 or AISI 316L.
- Nuts are made from stainless steel AISI 316 and are coated with molybdene to prevent galling.
- Stainless steel washers.
- Small clamp sizes are equipped with a handle to facilitate installation.
- All parts have been rounded and have undergone chemical treatment after welding to return the corrosion resistance to its original state.
- Available rubber gaskets NBR - EPDM compounded for water-gas and sewer service. Other compounds are available on request.
- The rubber is tapered and has a waffle pattern.
- Bridge plate is vulcanized into the rubber gasket.
- Double folded lifter bar.
- No loose parts that may get lost during installation.
